Aging in Community Initiative: Supportive Housing to Supportive Living

Elisa Chow, PhD, ACSW, LMSW

2018 Supportive Housing Network of New York Conference, June 2018
ICL Mission

Assist individuals and families affected by or at risk of mental illness or developmental disabilities with integrated comprehensive care designed to improve their wellbeing, recovery and participation in community living.
People get better with us.

ICL Core Principles: TRIP

• **TRAUMA-INFORMED**: sensitive to an individual’s past experiences and how they may impact current choices and behaviors.

• **RECOVERY-ORIENTED**: concentrates on the four major dimensions of recovery; home, health, purpose and community.

• **INTEGRATED**: addresses physical health, mental health and substance use issues using a coordinated multidisciplinary team.

• **PERSON-CENTERED**: focuses on the goals and values of the individual as primary determinant of services provided.
People get better with us.

ICL: Types of Services

- Supportive Housing Programs
- Assertive Community Treatment (ACT) Teams
- Personalized Recovery Oriented Services (PROS)
- Outpatient Mental Health Clinics
- Shelters
- School-based Programs
- Family Resource Center
Aging in Community

*Aging in Community* is an initiative that focuses on addressing older adults whole health needs to remain in supportive housing and in their community while reducing health costs associated with aging.

Approach:
- To understand the breakdown by age groups that lives in supportive housing
- To assess the individuals and their environment
- To determine what aspect of health to focus on
- To develop a plan for improvement
- To track and monitor progress
People get better with us.

Model Basics: **Aging in Community**

- Conduct *Aging in Community* workgroup meeting
- Train agency staff on aging
- Collect Agency-wide Clinical High Risk data
- Train staff on health-specific topic*
- Conduct PLACES@ICL assessment
- Implement plan
- Develop and implement corrective action plan as needed
- Establish the team (i.e. social work, nursing, psychiatry, housing models, policy)
- Conduct physical area assessment of one residence
- Identify health focus
- Conduct first health-specific topic assessment
- Develop implementation plan
- Track and monitor progress

* Training is dependent on data findings
Conduct Physical Area Assessment of One Residence

• Identify areas that can be modified and/or improved to better fit the aging population

• Assess the space usage and make up of a house
  – Type of flooring
  – Type of lighting
  – Safety equipment (i.e. railings installed in the bathroom)

• Findings are utilized and integrated into home assessments across housing programs
Collect Agency-Wide Clinical High Risk Data

- Each program is responsible for completing and updating their clinical high risk data periodically.
- Use a clinical risk algorithm to identify program individuals as clinical high risk.
- Identify most prevalent health issues and health-specific focus for the *Aging in Community* initiative.

![Example: Medial Diagnosis by Age Categories]

- Sum of Cholesterol
- Sum of Cardiovascular
- Sum of Diabetes
- Sum of GI
- Sum of Hypertension

<table>

</table>
Conduct Health-Specific Focus Assessment

- Identify multiple parties (i.e. nurses and case managers) that can be trained to administer health assessments

- All parties are trained and provided with the proper equipment to administer the assessment

- Create multiple opportunities to conduct health assessments in efforts to collect as much data as possible, including:
  - Creating centralized locations, where individuals can visit
  - Conducting assessments during home visits

- Develop standardized intervention protocols to address at-risk individuals to be used
Conduct ICL’s People Living and Aging in Community Experience Success (PLACES) Assessment

- PLACES evaluates a person’s quality of life, including social environmental factors that would impact his/her physical and mental health:
  - Housing
  - Transportation
  - Interpersonal relationships
  - Food security

- Developed using several standardized tools, focusing on various aspects of a person’s life

- Assessments are conducted by their case manager, during home visits, and with the individual
People get better with us.

Develop and Implement Opportunities to Achieve Positive Outcomes

- Utilize evidence-based practices and models, as well as ICL programs to create optimal treatment-to-target solutions
- Once implemented, track and monitor ongoing performance to ensure a positive outcome is achieved
People get better with us.

Outcomes - Track and monitor progress

- Track and monitor progress to:
  - Determine if the program is achieving positive outcomes
  - Identify additional opportunities for improvement
  - Identify need for corrective action plans
  - Use data for lessons learned

Example: Comparing July 2017 and February 2018 At-Risk BP (=>140/90) Screens

- July'17_At-Risk BP
- Feb'18_At-Risk BP

ALL (N=79)
People get better with us.

Example: Using ICL’s PLACES Assessment

"I feel isolated from others"

Focus on social isolation of adults living independently in supported housing (SH) and treatment apartments (TAP)

"I feel left out"

"I have someone who will listen if I need to talk"
People get better with us.

Example: Treatment-to-Target Solution to Address Social Isolation

- Aging in Community’s Social Isolation Pilot Program:
  - Designed to increase social support and decrease social isolation of individuals who responded they felt isolated “all the time” or “usually”
  - Each individual receives a call 1-2 times a week from the Aging in Community implementation team
  - Communicated pilot program to case managers and administration for collaboration
People get better with us.

Example: Next Steps – Track and Monitor Efforts Made To Address Social Isolation

- Reassessment of loneliness, isolation, and social support using PLACES
People get better with us.

Future work

- Connect individuals eligible for HARP with behavioral health HCBS services
- Increase partnerships within the community
- Expand healthy living groups in home programs
- Include peer support for aging individuals
- Refine the Aging in Community model

Example: Decrease in ER Visits and Hospital Admissions
People get better with us.

Thank You!
